# ABOUT

We pride ourselves on our innovative collection of laminates that pushes the boundaries of design. Our team of creative experts constantly strives to bring you the most eclectic and captivating designs for your spaces. With a focus on quality and aesthetics, we offer a premium range of laminates that exude elegance and sophistication. Each piece in our collection is carefully crafted to enhance the visual appeal of any environment. Experience the artistry and excellence of our laminates as we redefine the way you perceive interior design.

A perfect blend of natural textures  
and refined beauty for a genuinely  
charming space.

Dimensional stability at deviated temperature <ul style="list-style-type: none"> <li>• Longitudinal (%)</li> <li>• Transverse (%)</li> </ul>	0.550 (Maximum) 1.025 (Maximum)	
Dimensional stability at 20°c <ul style="list-style-type: none"> <li>• Longitudinal (%)</li> <li>• Transverse (%)</li> </ul>	0.375 (Maximum) 0.600 (Maximum)	✓
Resistance to impact by small diameter ball	20N (Minimum)	✓
Resistance to cracking	Not worse than 4	✓
Resistance to scratching	2N (Minimum)	✓
Resistance to staining	Not worse than 5	✓
Resistance to color change ( wool standards ) <ul style="list-style-type: none"> <li>• In xenon arc light</li> <li>• In enclosed carbon arc light</li> </ul>	Not worse than 6 Not worse than 5	✓
Resistance to cigarette	Not worse than 3	✓
Resistance to steam	Not worse than 4	✓
Appearance	Free from foreign particles	✓

## Laying Instructions for HPL Laminate Sheets

Before use ensures that the surface or plywood and laminates is Clean, Dry, Leveled and free of Oil, Excess moisture or other contaminants, such as dust, synthetic particles, etc.  
 Only use white PVA Adhesive to stick the sheet. Apply Double Layer of Adhesive on Edge (Minimum 3-4 Inch) of Both The Surfaces.  
 The adhesive should always be stirred before use. Sufficient adhesive should be applied on both of the surface to be bonded. Don't add water into the adhesive, it makes the bonding weak.  
 Once adhesive applied is tricky in nature (Usually requires 5-10 minutes, depending on atmospheric conditions), the laminate should be placed on the surface, accurately aligned.  
 Sufficient bonding procedure to ensure intimate contact necessary for an adequate bond should be applied over the entire area using as much as procedure as possible as possible without damaging the assembly.  
 Pinch rollers (Rotary Press) and heavy weighted rollers are ideal; Hand rolling should be done from the center to the edges to ensure the removal of air bubbles. The edges should be rolled twice.  
 For Satisfactory bonding, the area in question should be kept under pressure fir a period of 12-18 hours (Depending on atmospheric conditions).  
 In rainy season or when humidity is too high, moisture may condense on the surface during drying (Know as "Blushing") and will prevent an acceptable. Hot Spray or Forced air drying may be used to help prevent this condition.  
 It is recommended that the maximum sheet size used for vertical field application be limited to 610x2440 mm (2x8 Ft.).  
 When laminate is pasted vertically, Maintain uniform pressure on all sides till adhesive is dried.  
 To avoid stress cracking, avoid making cut out having sharp corners and rough edges.  
 A gap of minimum 2 mm should be maintained between two laminates while pasting side by side.  
 Due to transportation limitations laid the laminate sheet on flat surface in between 2 plywood sheets for minimum 48 Hrs.
